Education

Rajiv Gandhi Institute of Petroleum Technology (INI), Jais, Amethi 2024 – 2028
B.Tech in Information Technology - CGPA: 7.59

ISC Class XII - 86.75% 2023
Computer Applications (Java): 96%

ICSE Class X - 91.4% 2021
Computer Applications (Java): 98%

Design & Technical Skills

- **Design:** Figma, Jitter, Canva, UI/UX Design, Prototyping, Visual Design
- **Development:** Java, Python, C++, C, SQL, HTML, CSS
- **Application:** Flutter, Android SDK, Room Database, SQLite, Streamlit
- **ML & AI:** TensorFlow, Keras, Scikit-learn, Feature Engineering
- **Tools:** Git, GitHub, VS Code, IntelliJ IDEA, Google Colab

Experience

Summer Research Intern, Deep Learning Lab May 2026 – July 2026
Indian Institute of Information Technology Allahabad (IIITA)
- Developed Java-based Android modules and contributed to the modular design of a cybersecurity application.
- Designed application-level analysis components to organize behavioral information for machine learning-based threat detection.
- Collaborated with faculty members to evaluate detection techniques and improve the application's modular design.

McKinsey Forward Program May 2026 – July 2026
McKinsey & Company
- Completed a 10-week professional development program focused on structured problem-solving, communication, adaptability, relationship building, and digital and AI essentials.

Co-Head, Maker's Club August 2025 – July 2026
Science and Technology Council, RGIPT
- Led a 3-member core team and mentored 20+ juniors while organizing technical workshops and hands-on sessions.
- Coordinated and hosted an Intellectual Property Rights (IPR) workshop attended by 150+ participants and managed technical event execution.

Projects

404 Error Page - UI/UX Design
Figma GitHub
- Designed a custom 404 error page interface using Figma with a focus on visual hierarchy, layout, and user experience.
- Created animated visual elements and motion interactions using Jitter to develop a more engaging error-state experience.

Android Behavioral Detection and Threat Scoring System (ABDTS)
GitHub
- Engineered a modular Android application using Java, Flutter, Android SDK, Room Database and SQLite for behavioral threat analysis.
- Designed modular application components and integrated Android system APIs to present and analyze application-level behavioral information.
- Structured extracted application data into machine learning-ready datasets for downstream threat analysis.

Food Delivery Time Prediction using Deep Learning
Deployed App
- Built an end-to-end delivery time prediction application using TensorFlow/Keras on 104,603 delivery records with time-based feature engineering.
- Developed a Scikit-learn preprocessing pipeline using imputation, StandardScaler and OneHotEncoder, producing 90 model-ready features.
- Deployed the trained prediction model through a Streamlit interface for interactive delivery-time estimation.

Achievements

- **Adobe University Hackathon 2026** - Advanced to the Final Round; results pending.
- **Amazon ML Summer School 2026** - Finalist; advanced to the final Selection Test.
- **HMEL Energy Quest 3.0** - Advanced to the Final Round.
- **AlgoUniversity Technology Fellowship (ATF) 2025** - Top 8% nationwide in Stage 1 among 250,000 participants; advanced to Stage 2.
- **Smart India Hackathon 2025** - Top 20 Teams in the RGIPT Internal Hackathon.
